TECHNOLOGY CENTER 2800

- al
1. An optical fiber with Numerical Aperture (NA) compression comprising:  
  
a tapered fiber section of a predetermined length having a light input end of a first predetermined diameter and having a light output end of a second predetermined diameter greater than said first predetermined diameter, said tapered fiber section further being encased in a ferrule, and said light output end is either integrally formed with a lens surface or has a lens surface added thereto.
  2. The combination according to Claim 1 wherein said tapered fiber section has a uniform taper from the light input end thereof to the light output end thereof.
  3. The combination according to Claim 2 wherein said tapered fiber section has a generally conical shape.
  4. The combination according to Claim 1 wherein said tapered fiber section has a generally conical shape.
  5. An optical fiber with Numerical Aperture (NA) compression including in combination:
